

Collision Center Planning Questionnaire - 2024

Design Services (Select all that apply below)		<i>U.S.</i>	
	Design Review (Consultation review of your existing plans)	\$350.00	
	Off site 2 D Facility Design (CAD Design created for your facility remotely)	\$3,950.00	
	On site 2 D Facility Design (Travel to you to measure, discuss, and create CAD Design on site)	\$5,750.00	
	Under roof area exceeds 20,000 square feet (20,001 – 30,000 add \$500, 30,001-40,000 add \$1,000, etc.)	add \$500.00 per additional 10,000sf	
	3 D Facility Design (Upgrade On or Off site 2D Design service to 3D Model)	add \$2,500.00 to above price	

Bill to: *MUST BE COMPLETED			To be completed by the Business Solutions dept.

Design Requirements

Please indicate which of the following are required within your new facility plan.
Production Line flow
Meticulous Disassembly / Repair Planning Area # Cells
Calibration Spaces (30'x50' dedicated) # Cells
Estimating Bays
Inside # Outside # Under Canopy
Parts Verification Area
Parts Storage Room
Parts Carts # Carts
Receptionist Area Design Requirements:
Customer Waiting Area Design Requirements:
Meeting / Conference / Training Room - # of Seats:
Vending / Kitchen area
Customer Restrooms Uni-sex Separate
Office Employee Restrooms Uni-sex Separate
Outside Production Area Description:
Hazardous Waste Storage Room Inside Outside
Material Storage Room
Paint Mix Room
PPG MoonWalk [®] paint mixing system
Compressor Room
Equipment Storage Room
Employee Break Room - # of Seats:
Employee Locker Room/Changing Area
Employee Showers

Site / Building Information

- Site plan and/or floor plan drawings should be included with this questionnaire <u>Electronic CAD files if available</u>.
- <u>The following information needs to be provided</u> If there are no existing / previous plans.
 - 1. Site boundaries with dimensions. (show easements and setbacks).
 - 2. Outline of existing buildings with dimensions.
 - 3. Layout of internal walls, doors, and windows.
 - 4. Columns and other fixed structures with dimensions.
 - 5. Location of access roads, driveways, and parking areas.
 - 6. Location of gas / water mains and electric panels
 - 7. Location of all fixed shop equipment.
 - 8. Location of any restrictions or limitations (i.e. Radiant flooring heating, transformers, underground/overhead cables, drains, elevation changes, etc.)
 - 9. Outline and relative location of any other building on the site.

PPG Industries - MVP Dept.

10. Detailed interior and exterior photographs of buildings to be renovated

Return completed questionnaire to:

19699 Progress Drive Strongsville, Ohio 44149 MVPMAILBOX@PPG.com or Fax (440) 572-6980

Design Completion / Invoicing:

A design is considered billable upon distribution of a preliminary design when presented on the PPG titleblock. At this point customer supplied design specifications have been met and have rendered a drawing that represents a feasible design for implementation. Following this distribution, up to 3 revisions to this design constituting a maximum of 3 hours CAD design time may be completed at no additional charge. Additional hours of design are billable at \$250 per hour. Any change request following submission of the preliminary design which significantly alters the design will constitute a new design and serve as a newly billable project. Significant changes can consist of a change of building shape by more than 20% as measured by affected square footage, a change in property/site, number of floors/levels, or a change of design type (I.E. from GreenField to Expansion or Redesign or combination thereof).

Use and Content:

PPG Design Services provide a representation of a facility layout and are not to be used as a construction documents. The plans are based upon information provided to PPG design staff either on site or remotely and are limited to use for planning purposes only. No warranties or guarantees on production or sales potential are stated or implied. The plans are intended to identify the ideal placement of workstations, equipment, departments, and open areas to maximize space utilization, repair flow, efficiency, and productivity in a collision repair facility. The plans and all dimensions must be verified and checked completely by the architect, engineer, contractor or builder to ensure that all codes, ordinances, and regulations (Federal, State, County, Local City, and Fire), which take precedence over any part of PPG drawings, are adhered to before and during construction. Builder and/or owner are to verify location of structure in relation to all building setbacks, property lines, and easements. Columns, beams, footings, floors, roofs, retaining walls and any other structural elements shown are suggested and are for reference only. Dimensions for equipment should be verified with equipment manufacturer/reseller as the dimensions can vary between manufactureers and specific models of equipment selected for installation.
