# MVP Job Methods

## CONTINUOUS IMPROVEMENT

Achieving the critical goals of Quality, Speed and lower Cost of operations requires process improvements. The skills learned through Job Methods will help managers and team leaders approach process improvement using a proven simple and practical approach. Participants are taught how to breakdown jobs into their component operations. Every detail is questioned in a systematic manner to generate ideas for improvement. New methods are developed by eliminating, combining, rearranging, and simplifying steps in the process. MVP Job Methods provides resourceful methodologies for identifying and addressing improvement opportunities in the business. It teaches a blueprinted process that adheres to a "Learn by Doing Discipline".

## TWI for Collision

### The Practical Application of Training Within Industry (TWI) for Collision Repair

It is common to hear leaders of an organization say, "People are our most valuable resource." In fact you'll find those exact words in the mission statement of many businesses. So, with people being a most important asset in building a more competitive business, why is so little being done to maximize their potential? The answer for most organizations lies in the fact that managers, supervisors and group leaders typically lack the training and practical skill set to help transform a good employee into an exceptional one.

That's the purpose behind MVP's set of three interrelated TWI for Collision training courses. Taken together, these skill building courses provide the training required to unlock the potential any leader, formal or informal — in fact your entire organization.
